ABSTRACT

In the era of digitalization, the online gaming industry has witnessed an unprecedented surge in popularity, notably catalyzed by the global COVID-19 pandemic. In response to this trend, I've crafted a Java-based racing game named "Car Racing Game" that promises an immersive and exhilarating gaming experience. Boasting its own secure login page and a comprehensive player database, the game enables users to create personalized profiles, ensuring the safe storage of their game progress. As players engage in high-speed races, the game prioritizes realism through authentic car physics, delivering a visually captivating experience with dynamic tracks and challenging obstacles.

"Car Racing Game" stands out in the competitive gaming scene because to its distinctive set of rules. The game gains a strategic element when virtual automobiles collide with one another, resulting in an instantaneous game over. In order to get better scores, players are encouraged by its design to aim for top speed while deftly navigating around hazards. The game appeals to a wide range of players, relieving stress for those who play for fun and giving serious players a competitive edge, thereby helping to fuel the billion-dollar online gaming industry.

Most importantly, "Car Racing Game" priorities user security and privacy. The game ensures a safe and entertaining gaming experience for all players by not requesting any private information during the login process and by not sharing application data with other apps. "Car Racing Game" seeks to make a name for itself as a notable competitor in the rapidly changing gaming industry by offering a smooth combination of realistic gameplay, user-centric design, and privacy protection in this fast-paced digital age.

ACKNOWLEDGEMENT

The satisfaction and euphoria that accompany the successful completion of any task would be impossible without the mention of the people who made it possible, whose constant guidance and encouragement crowned our efforts with success.

I have great pleasure in expressing gratitude to **Dr. Mohan Manghnani**, Chairman, New Horizon Educational Institutions, for providing necessary infrastructure and creating good environment.

I take this opportunity to express my profound gratitude to **Dr. Manjunatha,** Principal, New Horizon College of Engineering, for his constant support and encouragement.

I would like to thank **Dr. R. J. Anandhi**, Professor and Dean-Academics, NHCE, for her valuable guidance.

I would also like to thank **Dr. B. Rajalakshmi**, Professor and HOD, Department of Computer Science and Engineering, for her constant support.

I also express my gratitude to **Ms. B. Channarayapriya**, Assistant professor, Department of Computer Science and Engineering, my mini project reviewer, for constantly monitoring the development of the project and setting up precise deadlines. Her valuable suggestions were the motivating factors in completing the work.
